

LOSZYCO

INNOVATIVE INTRA-LOGISTICS

WE BRING PRODUCTION IN MOTION

FOCUSED ON INNOVATIVE SOLUTIONS

ONE TEAM FOR
YOUR PROJECTS

FULLY COMMITTED TO SUCCESS OF OUR CUSTOMERS

Since our founding the **LOSZYCO** team stands for **individual, efficient** and **customized** systems in the field of intra-logistics.

We have made it our mission to make your factory more efficient. Our experienced team supports you with solutions around the transport of heavy loads in your production. Your benefits and individual requirements are always in our main focus. At eye level and in cooperation, we jointly develop

and implement a solution for your tasks. We plan, design, produce and install intra-logistics systems worldwide in various sectors of industry.

Our corporate culture is based on a fair and collegial interaction with each other. With our young, dynamic team, we expedite your projects and stand for innovation and flexibility.

INNOVATIVE INTRA-LOGISTICS

OPTIMIZED SOLUTIONS FOR THE MATERIAL FLOW IN YOUR PRODUCTION

LOXrail[®] SYSTEMS

ASSEMBLY LINES

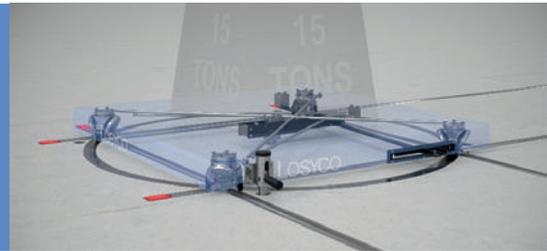

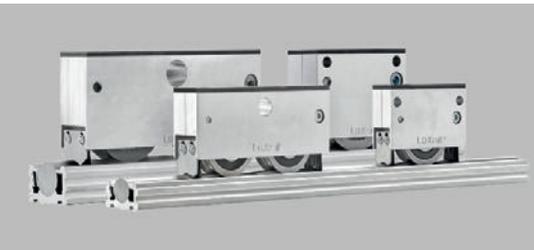

MATERIAL HANDLING
SOLUTIONS

TRANSPORT SYSTEMS

**VARIABLE,
ECONOMIC,
EASY-RUNNING**

HEAVY LOADS BUT EASY MOVE

Our LOXrail® floor rail system offers the right solution also for transporting heavy products. Thanks to the flush-to-floor installation, areas remain walkable without tripping hazards or obstacles and crossable also with small-wheel industrial trucks. Greatest flexibility is achieved with our systems for changing the moving direction. Our variable drive systems allow an adapted degree of automation based on your requirements. Low rolling resistance and high

precision allow energy-efficient drives or even manual operation for heavy products.

WHY LOXrail® ?

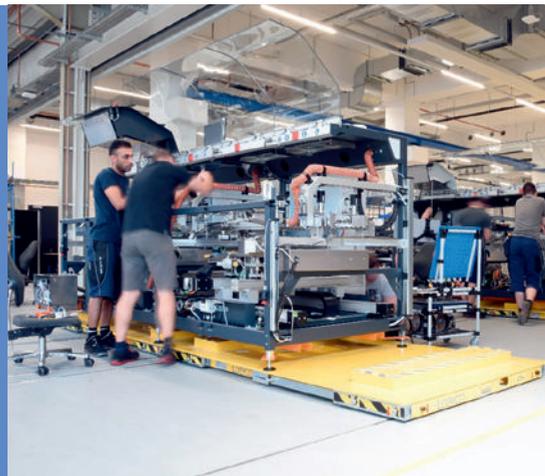

- Floor even without obstacles
- Very low rolling resistance
- Greatest flexibility by crossing and rotation options

INCREASES EFFICIENCY AND REDUCES COSTS

Based on our LOXrail® floor rail system, we offer individual solutions for assembly or production lines for medium to heavy loads. Whether machine tools, wind turbines, large switchgears, printing machines or modular homes - we offer our customers tailor-made conveyor technology solutions for flow production.

- **Individual trolleys or carriers** enable ergonomic assembly processes
- **Flexibility** by adaptable systems for change of moving direction
- **High reliability** with low maintenance costs
- **Various drive systems** for customized degrees of automation

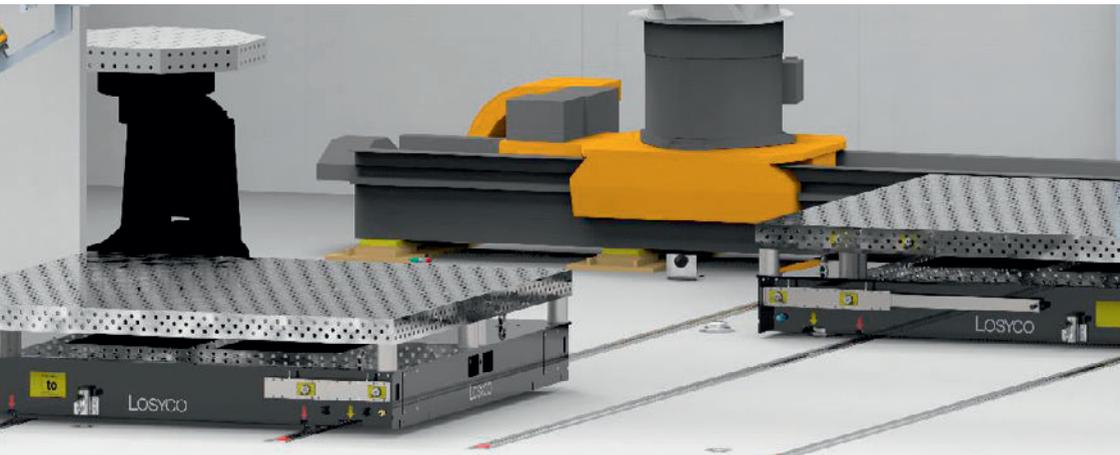

FOR THE OPTIMAL MATERIAL SUPPLY

We implement individual, precise feeding systems for material provision in automated laser welding or laser cutting systems as well as robot welding stations. In addition, we create loading and unloading equipment for stacking systems, high-precision measuring machines or for winding machines in the paper and film industry. Our systems allow the highest positioning accuracy and precision.

- Parallel loading during uninterrupted up-time production
- Highest repeatability
- Interfaces to the existing system can be individually configured

TAILOR-MADE SOLUTIONS

To transport heavy loads from A to B within your factory, our transport systems are ideally suited as an alternative to conventional conveying systems. We realize cross-connections of hall sections that cannot be connected by conventional crane systems or simple trolley-based vehicles.

- Simple connection of parallel crane bays
- Flush-to-floor installation, therefore less influence on the building structure
- Minimized dangers of transporting over-head loads

LOS YCO
